Subject: Draft Chem Sector 114
Attachments: Chemical Manufacturing Section 114 Component I Questions.docx; Chemical Manufacturing Section 114_Enclosures 2 through 6.pdf

Hi Mike and Hali,

I wanted to share with you all a quick update on where we are and see if you all wanted review any of the draft CAA section 114 ICR for the chem sector? The request will have a cover letter, 6 enclosures, and two overall components with it. Component 1 is questionnaire, review of emissions inventory, and request for a number of items such as air permits, previous performance tests, etc. Component 2 is our stack testing and fenceline monitoring component. We just finished a final review of our draft of Component 1 and have both a Word version and Excel response version (which is what industry will use to respond to us). I'm sharing with you a copy of the Word version (attached) in case you may want to review or have any comments (and since it's easier to comment in then Excel). Enclosures 2-6 are pretty standard boiler plate enclosures we send along with all of our CAA section 114 requests and are all also attached for your review.

We are still working on enclosure 1, which has general instructions, instructions for component 1, and our full request for component 2 (stack testing and fenceline monitoring). We are also still working on the cover letter that Penny will sign to accompany the request and will lay out the entities subject to this request. We will likely have these available for you all to review next week, but was cognizant of holiday leave quickly approaching and wanted to give you some time to review if you'd like before you presumably take off a few weeks (like me). Obviously, it's unlikely we will be able to send the request out before the end of year given people's leave schedules and all, but are hoping to get it out in early January when everyone returns. Anyways, if we need to chat more or you all have an feedback you want to provide, let me know. Thanks!
